

Professional Web Developer Certification Examination

Introduction

This examination evaluates your skills and knowledge in order to determine that you can perform the tasks required of a Professional Web Developer. The exam will certify your level of professional expertise and will confirm that you understand:

- Web page design
- Web page authoring
- Supporting Web technologies

At this level, the basic knowledge and skills required include all of the following areas and objective components:

- One or more years experience with HTML, CSS, and JavaScript
- Completion of Allaire's Fast Track to HTML Class or equivalent
- Understanding of fundamental Web design principles
- Understand how browsers and Web server process HTTP requests

A team of highly qualified Allaire Web development experts defined the test content and wrote the test items.

Note: This examination blueprint includes weighting, test objectives, and example content. Example topics and concepts are included to clarify the test objectives. They should not be construed as a comprehensive listing of all content found in this examination.

The table below lists the domains measured by this examination and the extent to which they are represented.

Domain	% of Examination
1.0 Web Fundamentals	20%
2.0 Web Authoring	40%
3.0 Deployment and Maintenance	10%
4.0 Advanced Features	20%
5.0 Troubleshooting	10%
Total	100%

Response Limits

The examinee must select the response option that best completes the statement or answers the question. Distracters – or wrong answers – are response options that examinees with incomplete knowledge or skill would likely choose. These are generally plausible responses that fit into the content area defined by the test objective, but they do not completely or accurately answer the question.

Test Item Formats:

Multiple-choice: The examinee selects one option that best answers the question or completes a statement. The option can be embedded in a graphic where the examinee “points and clicks” on their selection choice to complete the test item.

Multiple-response: The examinee selects more than one option that best answers the question or completes a statement.

True/False-response: The examinee is presented with a statement and identifies whether the statement is either true or false.

Sample Directions: The examinee reads the statement or question. From the response options offered and given the information provided, the examinee selects only the option(s) that represent the most correct or best answer(s).

Content Limits

Domain 1.0 Web Fundamentals

This topic area evaluates an examinee’s basic understanding of Web technologies, Web authoring, and coding. These topics represent the fundamentals on which Web development is built.

1. Identify fundamental characteristics of using coding and supporting technologies in Web authoring.

Content may include the following:

- Cross browser support issues
- Web page authoring and page elements
- Browser/server interactions. Browser size vs. screen size (640 x 480 or 800 x 600) percentage vs. fixed size
- Architecture
- Navigation
- HTML/ DHTML standards related to Web
- File naming standards
- Graphics – the basics: knowing the different formats and the advantages of using each

- Search engines and indexing
- Web animation

Domain 2.0 Web Authoring

This topic area tests an examinee's application of the Web authoring fundamentals required when creating professional Web sites.

2. Identify the proper usage of HTML Web authoring.

Content may include the following:

- Basic format of Web page source HTML, DHTML
- Best practices
- Nesting frames
- Nested tags
- Client-side scripting
- Meta tags
- Lists
- Links – internal and external to a document
- Absolute and relative URLs
- Physical vs. logical tags
- Forms
- Frames
- Styles
- Web server issues
- Tables
- Usability and accessibility
- Browsers
- Advanced graphics (interlacing images, image slicing, image maps, using attributes, transparencies, etc.)
- Attributes

Domain 3.0 Deployment and Maintenance

This topic area evaluates an examinee's knowledge regarding activities performed during the set-up and maintenance of a professional business Web site.

3. Recognize critical procedures and their use in deploying and maintaining professional Web sites.

Content may include the following:

- Graphic usage
- Reliability
- Staging an environment
- Site testing and link validation
- File management

- Best practices
- Usability testing
- Code validation
- Link verification
- Source control

Domain 4.0 Advanced Features

This topic area examines an examinee's understanding of advanced features in Web authoring that extend the functions of many professional Web sites.

4. Identify advanced approaches to Web site authoring.

Content may include the following:

- Database connectivity
- Multimedia
- Security
- New technologies
- CSS
- DHTML
- JavaScript
- Image slicing
- Site performance issues
- Internationalization
- Mouse overs
- CGI scripting
- XML
- XHTML
- Cookies

Domain 5.0 Troubleshooting

This topic evaluates an examinee's understanding of troubleshooting Web site problems and whether the examinee knows how to resolve them.

5. Recognize and evaluate common symptoms and problems associated with Web authoring. Know how to troubleshoot and isolate the problems.

Content may include the following:

- Code identification and isolation techniques
- Web server error messages
- Table troubleshooting
- Browser support issues
- Linux issues
- Server Log Usage
- User Feedback Loops
